

Line Color Options

PRINTABLE TEST SWATCH

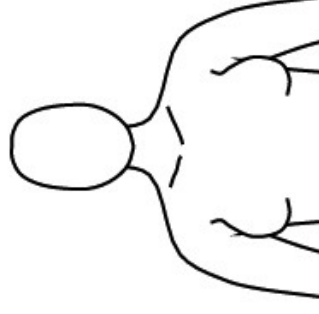

Even though we recommend selecting the “light gray” line color for printing, the darkness of printing seems to vary greatly from printer to printer. Here is a printable test swatch that includes all the grayscale line options. Print this page to test the different lines on your printer before purchasing your body model download. If the light gray is too light, then we suggest selecting the dark gray line option for your body model. The line color selection is located on the measurement form under section “1. General.”
